•	Education, Department of Intellectual Disabilities and	
Learning Difficulties, Department of Psy	-	
Learning Differences, Department of 1 sy	enopedagogy	
The course is offered within the followin	g programme:	
international exchange study programme		
Course contents and learning outcome:		
Topics:		
Chronic illness and learning dis	ability in childhood	
• Executive function, figurative la	-	
	n of children with and without LD	
• ICT and special education		
-	ith mild intellectual disabilities in primary schools	
<u>Aims</u> : The aim of the course is to provide an overview on some of the most current research topics and empirical findings concerning the education and development of children with general learning disabilities		
and behavioural problems. The course comprises of the introduction of eight individual research programs		
<b>A</b>		

that investigate different aspects of special education. Therefore, as a result of the course design, by the end of the semester, students will gain insight into:

- the different type of chronic pediatric problems that have consequences in mental development, learn methods of biopsychosocial rehabilitation of children with chronic illness and their families
- the most important concepts, the difficulties and the development of executive functions and figurative language among children with learning disability
- the most important concepts and theories of learning and reading motivation and the characteristics of reading motivation among children with and without learning disabilities

As the individual research programs use various research methods and design, students will also get an introduction to the different techniques of empirical research in the field of special education.

Teaching and learning methods:

Teaching and learning methods include presentations, explanations and analyses of research results.

Compulsory reading:

- Allen PJ, Vessey JA, Schapiro NA: Primary care of the child with a chronic condition, Mosby Elsevier, USA, 2010.
- Lee Kamhi: Metaphoric Competence in Children with Learning Disabilities. In Journal of Learning Disabilities 23 (1990) 476-482.

Lajos, KULLMANN Dr. habil.

E-mail address:

lajos.kullmann@barczi.elte.hu

Faculty and department:

ELTE Bárczi Gusztáv Faculty of Special Education, Department of Physical Disabilities

The course is offered within the following programme:

international exchange study programme

Course contents and learning outcome:

Topics:

- Characteristics of PRM, the PRM team, competences of team members
- Assessment in PRM: 1) body functions and structures 2) activities and participation 3) environmental factors 4) quality of life
- Problem oriented rehabilitation plan
- Selected therapeutic methods in PRM: 1) Physiotherapy 2) Occupational therapy 3) Provision with assistive products 4) Brief introduction to additional therapeutic interventions
- Legal aspects, financing and services provision in PRM
- International trends; quality and efficiency

#### Aims:

- To get acquainted with the International Classification of Functioning Disability and Health (ICF), to become able to interpret the three dimensions of human life, additionally based on practicing to develop skills in recognising problem areas both in functioning and in the environment.
- To get acquainted with the concept of quality of life and develop attitudes recognising its importance.
- To learn selected methods of physical and rehabilitation medicine (PRM), and the competence of the relevant team members, to become able of participating in the PRM team, to initiate actions, develop rehabilitation plans and co-operate within the team.
- To get familiar with the institutional background of PRM, with its legal environment, and with the international trends of development.

Teaching and learning methods:

presentations, own reading, case histories,

Compulsory reading:

#### Course requirements:

Assessment in the course is based primarily on a *research paper* and on an *oral presentation* depending on the students' choice. Beyond developing a paper or a presentation students are required to read the compulsory texts and to contribute to the class with active co-thinking and regular participation.

Research paper

Students are requested to choose a 'question', a 'problem' or a 'theme' introduced and discussed in the class and encouraged to consult with the responsible instructor to gain access to further resources regarding their chosen field. The paper should be 8-10 pages long, double spaces, 12-pt font, Times New Roman, 1.5 inch margin on the sides.

It can be written individually or by a team of two students.

Oral presentation

Students who choose to hold an oral presentation are required to prepare and present a 'question', a 'problem' or a 'theme' from the content of the course in front of the class. They are encouraged to consult with the actual instructor to gain deeper insight concerning their interest. A presentation should not take more than 20 minutes, multimedia devices can be used.

The presentation should be developed individually or by a team of two students. Each presentation is complemented with a short (4-5 min.) critical reflection by a fellow student.

BUT there will be changes in the description!

international exchange study programme

Course contents and learning outcome:

#### Topics:

My topic is 'The representation of the historical development of the situation for women, children and persons with disabilities in major religions'; I explore the history of disability from the perspective of a historian of religion. I examine the history of disability as a historian of religion, in the context of social sciences and religious studies and in light of the different cultures of civilizations influenced by major religions. Disability History has only become a stand-alone discipline in the recent years. Even though the topic has been examined in many different ways, it was always subjected to the values and interests of other disciplines. This led to the fact that nowadays crucial fragments of the topic can be found in almost any discipline yet little, if any, attempt was made to collect and unite these fragments into cohesive works. Due to my research at the University of Vienna I mainly focus on German literature.

Aims:

In most cases, disability history was written by those experts who are in some ways connected to the different fields of disability science. The religious aspects of disability history are generally examined by experts adept in the teachings of a chosen religion. And they, either because of personal or scientific drive, are able to fuse together these different kinds of expertise in their person. All of these are exceptionally valuable works; many of them explore the chosen topic with painstaking attention to detail and with scientific professionalism. Departing from these viewpoints, as a historian of religion I want to show disability history from a different perspective in my thesis, focusing on comparison. Knowing full well that I cannot immense myself in every detail, I still wish to illustrate, as thoroughly as possible, how major religions handled disability and what they taught, said and preached about. As my focus is on comparison, based on the available sources I attempt to follow the crucial characteristics of disabilities from prehistoric roots to nowadays still valid teachings.
